

# Nomogram for estimating the probability of home discharge for cases admitted from home

Points for each item

Age

Sex

Body mass index

Assistance needs with  
 $\geq 1$  ADL at admission

Malnutrition

Japan coma scale

Hospitalization for aspiration  
 pneumonia within 90 days

Metastatic cancer

Dementia

Pressure ulcers

Pleural effusion

Oxygen administration

Respiratory support

Vasopressor administration

Performing sputum suction

Sum of points

Probability of home discharge

$\geq 95$       75–84

85–94      65–74

Male

Female

<17      18.5  $\leq$  BMI  $<$  25.0

17.0  $\leq$  BMI  $<$  18.5

$\geq$  25.0
